FLAGSHIP TALK

INTELLIGENCE IS THE NEW PURPOSE: CONSCIOUSNESS SHIFTS SHAPING THE NEXT ORGANIZING PRINCIPLES OF REALITY

Intelligence Is the New Purpose explores a consciousness expansion underway and the impending identity shifts in every domain that move us from individual 'purpose' as the north star, to 'intelligence' as the new organizing principle of reality. Our collective compass is shifting. "What's my purpose?" becomes, "What field of intelligence am I cohering with?" Perceptual intelligence, natural intelligence, ancient intelligence, cosmic, plasma, human, informational, artificial, emotional, and universal intelligences are trending.

As we individually and collectively shift our identity from disconnected old stories that no longer align with where we're going, we aim for purpose. Yet 'purpose' as a compass falls short of expanding awareness and connecting us to the new version of who we are becoming- and our higher human potentials. In the lost sea of our collective identity we're naturally cohering to intelligence. Which one is the question. As we listen to the frequencies that evolution proposes, we remember a natural order and lean in to a 'field' of intelligence where living information guides our perception, meaning making, and how we innovate our future into being. This talk shares how.
